

SWING-TOP CARE INSTRUCTIONS

PROPER CARE WHEN CLEANING YOUR SWING-TOP CAPS WILL ENSURE YOU GET AS MUCH USE OUT OF THEM AS POSSIBLE.

Just follow these simple steps:

1. Wash your caps and bottles by hand. Do not place them in the dishwasher. Although dishwasher cleaning won't affect the cap's effectiveness, the wire will tarnish.
2. There is no need to remove the caps from the bottles. We recommend our bottle brushes for a good and thorough bottle cleaning.
3. Use hot, soapy water. Do not use high temperature cooking methods on the caps. This will cause the seal to deteriorate faster. If you would like to sterilize them, submerge in boiling water for 10-15 minutes.
4. To clean under the seal, simply flip the seal up and clean underneath.
5. To dry, leave the seal flipped up, air dry on a cloth or paper towel. When the caps are dry, flip the seal back into position.
